

Document 1 — Executive Offer Note

ATLAS Isseksi ProjectCo — Moroccan Financial Partner Entry Note

First official document shared after execution of the Confidentiality Agreement (NDA). Private and confidential.

1. Purpose of the Offer

ATLAS is opening a limited, private financial partner layer in the Isseksi Green Copper Production Platform. A single Moroccan financial partner with industrial understanding is invited to enter Isseksi ProjectCo / SPV through a capital increase of USD 3.6 million against up to 10% of ProjectCo equity. The capital is ring-fenced for the current expansion phase: deployment of the mobile green copper processing station, preparation of the four-quarry operating architecture, working capital, technical execution, and reporting discipline.

This is not a sale of the mine, not a sale of the mining license, not a sale of founder shares, and not a transfer of AKANIL / HYRION technology. It is new money into a dedicated project company, governed by a shareholders' agreement, with full preservation of sponsor control.

2. Why ProjectCo

The ProjectCo / SPV structure isolates the partner's entry inside a clean, single-purpose vehicle. It gives the partner a transparent and auditable perimeter — one company, one budget, one use-of-funds schedule, one reporting protocol — while keeping the mining license with Atlas Mining, the technology and data architecture with AKANIL / HYRION, and the broader portfolio outside the transaction. The partner's rights and the sponsors' protections are both clearer because the perimeter is closed.

3. Why a Capital Increase

A capital increase ensures that every dirham of the partner's contribution enters the project itself. No founder is cashing out; no existing share changes hands. The structure aligns the partner with the expansion phase it is financing, supports a clean audit trail from subscription to deployment, and avoids the valuation and control complications of secondary share sales at this stage.

4. Why USD 3.6 Million

USD 3.6 million is the costed requirement of the current expansion phase: the mobile processing station (30%), quarry preparation (15%), equipment and material handling (15%), working capital (15%), technical team and QA/QC (8%), water, ESG and monitoring (7%), digital tracking and Data Room (5%), and legal, governance and transaction costs (5%). The amount is sized to the phase —

not to a general fundraising target — and is fully allocated in an approved Use of Funds schedule before closing.

5. Why Up to 10%

The 10% ceiling is deliberate. It brings disciplined expansion liquidity and an institutional first financial layer while preserving 90% sponsor ownership, protecting strategic flexibility for later strategic financing rounds, and avoiding premature entry of controlling industrial or offtake investors. At USD 3.6 million for 10%, the implied post-money structuring reference is USD 36.0 million (pre-money USD 32.4 million), to be treated as a negotiation reference rather than an audited valuation.

6. Why Three Staged Tranches

Payments of USD 1.2 million each are released at signing, after Gate 1, and after Gate 2. Staging protects both sides: the partner pays against demonstrated execution and reporting, and ProjectCo receives capital matched to its deployment calendar. Equity is recognized progressively against capital actually paid (3.33% / 3.33% / 3.34%), so the cap table always reflects funded reality.

7. What the Capital Finances

- Mobile green copper processing station — modular leaching, cementation and water-recovery unit (USD 1.08M).
- Preparation of the four-quarry operating architecture (USD 540K).
- Equipment and material handling — loading, hauling, crushing support (USD 540K).
- Working capital — labor, consumables, energy, logistics, continuity (USD 540K).
- Technical team and QA/QC — sampling, assays, production verification (USD 288K).
- Water, ESG and monitoring controls (USD 252K).
- Digital tracking, HYRION reporting layer and controlled Data Room (USD 180K).
- Legal, governance and transaction costs (USD 180K).

8. What the Partner Receives

- Up to 10% of ProjectCo equity after full payment, preserved according to the shareholders' agreement.
- Staged entry through three transparent payments with defined release conditions.
- Quarterly review rights every three months across financial, technical, operational, ESG and risk areas.
- Budget visibility and audit rights limited to ProjectCo accounts.
- Reserved-matter protections against material deviations and uncontrolled dilution.
- Priority participation right in future financing rounds (non-exclusive).
- Controlled, permission-based access to the investor Data Room.

9. What Remains Protected

- Atlas Mining's license position — not transferred, not pledged to the partner.
- AKANIL / HYRION technology and data architecture — licensed or contracted to ProjectCo, never transferred.
- Geological, technical and strategic data — controlled access only, through the Data Room protocol.
- Founder / sponsor shares — no sale; the partner's capital enters ProjectCo only.
- Operational control — remains entirely with the sponsors and project operators.

10. Next Steps

Following the NDA: opening of the limited Data Room; execution of a non-binding LOI; focused due diligence; agreement of the term sheet; preparation of ProjectCo documentation (capital increase resolution, subscription agreement, shareholders' agreement, use-of-funds and reporting protocols); and closing of Tranche 1.

Transaction Snapshot

Item	Closed Architecture
Transaction type	Capital Increase into Isseksi ProjectCo / SPV
Investor type	Moroccan financial partner with industrial understanding
Total contribution	USD 3.6M — new money into ProjectCo
Maximum investor stake	Up to 10% after full subscription
Sponsor retained stake	90% after full subscription
Payment structure	Three staged tranches of USD 1.2M each
Equity recognition	Progressive: 3.33% / 3.33% / 3.34% against paid capital
Monitoring	Quarterly review every 3 months
Future rounds	Priority participation right (non-exclusive)
License ownership	Not transferred — remains with Atlas Mining
Technology ownership	Not transferred — AKANIL / HYRION licensed or contracted
Data access	Controlled, permission-based Data Room only

Item	Closed Architecture
Operational control	Remains with sponsors / project operators
